Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maekawa et al.

Maekawa et al teach (Figure 1A, Figure 1B) a method of testing, including: disposing an oxide film 8 on a surface of a substrate 2; providing a probe 1 with a rounded end; measuring a characteristic related to the film and the probe while applying a "relatively small force" (col. 6, line 6) between the pad and the probe.

Maekawa does not apply a film on the rounded end piece in Figures 1A, 1B, and does not provide dimensions for the curvature.

As to claim 1, it would have been obvious to employ a curvature of 20-30 um for the tip because Maekawa teaches (col. 1, lines 30-35) use of a curved tip effectively measure electrical values of a circuit of interest. In addition, it would have been obvious to employ a film on the tip because Maekawa teaches (col. 11, lines 1-13) use of a coating 91 to allow for good electrical continuity for measuring. Finally, a "relatively small force" suggests a controlled force. In the alternative, it is known to utilize test probes in automated fixtures.

As to claim 2, a "relatively small force" suggests 10um.

As to claim 3, test probes commonly test for contact resistance values.

Art Unit: 2856

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Doezema et al teach use of a film TiN on a tip 30 that has a radius of curvature.

Mazur et al teach (col. 4, line 33) a range of curvatures similar to the application.

Claims 4 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
